Aging Drivers (as of March 10)

Real World Solutions for Keeping Aging Drivers Safely on the Road
This interactive roundtable session will provide you the opportunity to learn about innovative ideas, and proven programs and best practices for addressing aging drivers with medical conditions; forming a diverse older driver coalition; building successful partnerships; and providing ridesharing for seniors. Educational and training opportunities that are helping aging persons extend their safe driving years will also be discussed.

Working Together to Understand & Address Conditions Impacting Aging Drivers
Staying active and connected with friends, family and neighbors can promote healthy aging, but functional impairments, medical conditions and medications can impact an individual’s performance behind the wheel resulting in unsafe driving. Keeping aging adults mobile, while ensuring they and others on the road are safe is a balancing act that depends on the efforts of a broad range of stakeholders. A panel of experts will discuss current older driver and medical review practices; licensing policies; the role of DMV's and law enforcement; and the value of shared resources, including a review of the Clearinghouse for Older Road User Safety (ChORUS) and how it provides solutions to keep aging drivers safe.

Collaborating to Improve Aging Driver Safety & Mobility
Collaboration can be a simple and effective tool to help improve the safety, access and mobility of aging road users including drivers, passengers, pedestrians, bicyclists, motorcyclists, transit riders, and golf cart operators over the age of 65. Learn about the critical role collaboration plays in delivering successful aging road user programs in Florida, Georgia and Maryland. Experts from these states will outline their strategic approach for developing effective tools to educate and train stakeholders about resources available to benefit aging road users, that you can apply to your own state and local programs.

Building Effective Aging Drivers Interventions: Do You Have All the Right Pieces?
Drivers 65 and older are the fastest growing segment of the driving population and at greater risk for injuries and fatalities. They are also a diverse population requiring interventions tailored to meet their unique needs. What do you need to know to better understand aging drivers and help them remain safely mobile? An expert panel will offer a “more complete” view of the aging driver that takes into account the latest research and rapidly changing environmental and policy landscape. You’ll also learn about interventions that can help keep aging drivers safe and mobile; innovative alternatives to driving from autonomous vehicles to public/private transit partnerships; and the critical role of public health, healthcare, engineering, enforcement, and education.
